Share Purchase Plan Update

Brisbane, Australia – 26 June 2009: Metal Storm Limited (ASX trading code: MST, OTC Symbol: MTSXY).

The Metal Storm Share Purchase Plan (SPP) has raised \$824,500 to 5:00 p.m. Thursday, 25 June 2009.

A number of shareholders have raised the issue that the SPP closes on 30 June 2009 being the end of financial year which is restricting their ability to participate. The Board have therefore determined to extend the closure of the SPP until 5:00 p.m. Friday, 3 July 2009.

The Directors are pleased with the results thus far. However, there are still further funds to raise before we reach our \$2m target.

Metal Storm Directors who are shareholders will be contributing the maximum amount allowable under the plan. The technology's inventor and largest individual shareholders, Mike and Rhonda O'Dwyer, have also contributed to the maximum extent permissible.

The Board encourages shareholders who wish to participate in the SPP to complete their application forms and submit them as soon as possible.

About Metal Storm

Metal Storm Limited is a multi-national defence technology company engaged in the development of electronically initiated ballistics systems using its unique "stacked projectile" technology. The company is headquartered in Brisbane, Australia and incorporated in Australia. Metal Storm Limited technology and products are represented in the USA by Metal Storm Inc., which has offices in Arlington Virginia.

Metal Storm is working with government agencies and departments, as well as industry, to develop a variety of systems utilising the Metal Storm non-mechanical, electronically fired stacked ammunition system.

Metal Storm's weapon technology uses computer-controlled electronic ignition and a system of stacked projectiles, to achieve a completely non-mechanical gun that is very lightweight and compact, providing a very high firepower to weight ratio. The Metal Storm weapons system utilizes multiple barrels mounted together on one platform which allows varying munitions types to be deployed in a single, low cost, lightweight weapon system. Firing the weapons by electronic ignition requires no moving parts, allowing reliable long term unattended weapon operation.
